<b>Brief Summary</b>	<p>This prospective quick online based cross sectional study is intended to explore the knowledge, attitude and fear towards COVID 19 in Bangladesh during the rapid raising period. To determine the variables a semi-structured questionnaire will be used and analysed with appropriate statistical examination. The questionnaire will be sent through mail to 500 students and staffs of BHPI and CRP and said to fill up for them, their family and neighbours. The students and staffs will also be provided a video tutorial for filling the questionnaire. Data will be collected within 7 days and prepared for analysis.</p>
